How to open a Jupyter Notebook

How to open a Jupyter Notebook

Download a Jupyter Notebook with the '.ipynb' extension from Olympus. For example:

Click on the highlighted button to download the file.

Note: This above file will NOT open by double-clicking it.

Follow the steps below to open the Jupyter notebook:

1. Click on 'Start Menu' and search for 'Anaconda Navigator and click 'Open'.

2. Once the Anaconda Navigator is open, look for Jupyter Notebook and click 'Launch'.

3. Jupyter Notebook will open in the default web browser like below:

4. Here you can see the directory of your computer like Documents, Downloads folders:

5. Now navigate to the folder where your Jupyter Notebook from Olympus was downloaded. Generally, the file will download to your default download folder named 'downloads'.

6. In your browser click the 'Downloads' folder or whichever folder the file is downloaded to and click on 'Last Modified' twice until you see an 'Upward pointing Arrow' arrow which will sort the files which are recently modified or downloaded.
